

Well Pet Health Screen

Did you know, serious medical conditions in pets can go undetected for up to 2 years without noticeable symptoms?

The earlier a problem is detected, the more likely it is that we can treat your pet effectively, safely and give your pet a longer and better quality of life.

Treating serious medical condition early can be significantly less expensive than treating a serious medical condition once it is established.

What's the benefit of a Wellness Blood Screen?

Your Wellness Blood Screen will:

- check the function of your pet's major organs (e.g. liver, kidneys)
- help us to identify problems and diseases such as hormonal imbalances, infection, diabetes and anaemia.

How much does it cost?

If you have the Wellness Blood Screen done at the same time as your booster vaccination, you can take advantage of these great discounted prices:

Senior Well Pet Screen (Code: SNWPET)

(recommended for pets over 7 years of age)
(Normal cost is over £90 – saving you £41!)

only £49.00*

A further **20% off** for Healthy Pet Club members
(Code: HPCSNWPET)

only £39.20*
